

FRESH AIR BAY TRAINING UNIT

- ◆ Fresh Air Bay Training Units are portable, trailer mounted, scaled models of our production Fresh Air Bays
- ◆ Designed to provide miners hands-on training and experience
- ◆ Fully functional with a replicated tent inflation, air-lock purge and CO₂ scrubber system
- ◆ Replicated operation achieved through use of an air compressor and receiver tank
- ◆ Powered by 110 volt
- ◆ Controls, valves, regulators, gauges, access doors, tent deployment door and tent inflation release are exact replicas of the production unit
- ◆ The unit is designed to expedite repetitive operation during training exercises
- ◆ The Training Units inflatable tents are the same height and width as the standard production units
- ◆ The tent length is shorter to reduce inflate and deflate cycles
- ◆ The tents are constructed of durable material, suitable for repeated inflations and long life
- ◆ The airlock compartment is representative of actual Fresh Air Bay tents, including a functional purge air system
- ◆ All life support systems and CO₂ scrubbing are also provided
- ◆ Training units ensure miners receive accurate, real-life experience.

FRESH AIR BAY TRAINING UNIT

Lightweight, trailer mounted and road worthy, the Fresh Air Bay Training Unit can be towed to mine site locations

The Fresh Air Bay Training Unit Tent is a replica of the production units, including a fully functional airlock entry chamber and an external waste disposal bag

A replicated, fully functional carbon dioxide scrubber is stored in the skid.

Airlock entry chamber complete with functioning purge air controls
