

# Sentro Wireless CO Detector

Truly wireless Carbon Monoxide monitoring

The Sentro Wireless CO Detector is a fully wireless gas monitoring system that is powered by commercial grade D-cell batteries. The Sentro Wireless seamlessly interfaces with Strata CommTrac wireless communication networks to stream data continuously to the surface.

- Battery life 40-45 days
- Measures gas concentrations every second and reports every 90 seconds. Under Warning & Alert conditions it reports immediately
- Sentro can measure multiple other gas options
- Switching between gases requires only the quick change-out of the eModule sensor. Can be performed underground
- Easy service and calibration can be performed in seconds underground. Calibration includes simply exchanging eModule sensors. Quick release catch enables fast battery replacement

Pending

# Sentro Wireless CO Detector

Truly wireless Carbon Monoxide monitoring

## eMODULE SENSOR

---

- The heart of the Sentro is the Sentro eModule Sensor
- Intelligent standardized gas sensing module
- Multiple gas options
- Exchange of sensors is quick and can be performed underground
- Stores dynamic data including the condition of the sensor and service history

## FEATURES AND BENEFITS

---

- Easy to install, operate, calibrate and maintain
- Fast calibration underground while still powered
- Fast D-cell battery replacement
- Eliminates expensive setup and maintenance inherent in wired systems
- Optional local AV alarm
- LCD display provides clear info with direct on-screen instructions
- Dual-wall housing for strength against impact
- IP65 Rating
- EMC protected
