

# Concrete and Grout Pumping Services

## Pumping and Placing Concrete Mixes

Strata has the equipment and expertise needed to pump and place concrete and grouts underground

- We offer experienced labor and supervision to execute a wide variety of concrete and grout placement jobs
- Our concrete and grout pumps are capable of delivering material from surface or underground locations at rates up to 35 cubic yards per hour
- Our mixing system is designed to work underground or on the surface to deliver pre-blended material to the pump
- Special material mix designs are available to accommodate a variety of strength and placement requirements
- Technical support is available to assist mines in the planning and implementation of a project, including site evaluation and system design
