

Rocprop®

Mechanical Roof Prop

The Rocprop® is a compact mechanical prop that has been specifically designed for underground mining applications and offers active pre-loading. It provides constant load characteristics over a large closure range and at high convergence rates.

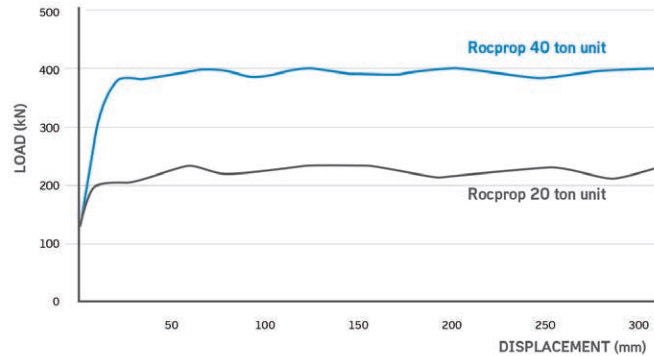

- Active support is achieved using hydraulic preloading
- On installation, the Rocprop® can be preloaded up to 10 tonnes.
- The mechanical yield mechanism provides load over a large convergence range of up to 30% of installed height
- Its ease of installation allows quick and simple placement
- Its size and weight allow large quantities of the Rocprop to be transported into the mine on a single trip.
- Ideal for use on longwall take-offs, maingate and tailgate support
- Use anywhere there is access to hydraulic or emulsion pressure, water or compressed air
- Comes with a variety of head and footboards, that are designed to meet all roof and floor conditions
- Available for mining heights from 1.2m to 6m.

APPLICATIONS

- Longwall moves (shield recovery)
- Belt drive support
- Brow support
- Systematic roadway support
- Tailgate, maingate and bleeder support
- Barrier line support
- Ventilation seal construction
- Long-term support in abandoned areas

ROCPROP™ Performance

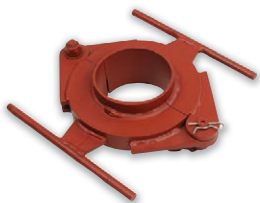

BENEFITS

- Quick and easy to install
- Installed vertical, horizontal and at an angle
- Creates pre-loading up to 10 tonnes
- Dynamic yield capacity
- Heights up to 6 metres
- Support applied exactly where needed
- Variety of accessories available
