

Rocprop®

Mechanical Roof Prop

The Rocprop® is a compact, all-steel roof support prop for underground mining that offers active pre-loading. It provides constant load characteristics over a large closure range and at high convergence rates.

- Rocprop is ideal for use in coal, hard rock and soft rock mining environments
- Active support is achieved using hydraulic pre-loading
- Can be installed at an angle or horizontally
- Easy to transport and install, offering significant savings in materials handling
- Usable anywhere there is access to hydraulic, emulsion or water supply

COAL MINING ROOF SUPPORT

- Available in a selection of sizes and in 20 ton and 40 ton variations
- Variety of headboards and footplates to distribute the load and prevent punching through
- Provide a workable solution for roadways and belt-drive support, as well as during longwall moves
- No ventilation resistance

HARD ROCK MINING ROOF SUPPORT

- High load-bearing capabilities make it suitable for high closure and seismic mining environments
- Provide constant hanging roof support to keep blocks in place during blasting
- Ideal for long term support in isolated, abandoned and high cavity areas
- Available in heights up to 20 feet

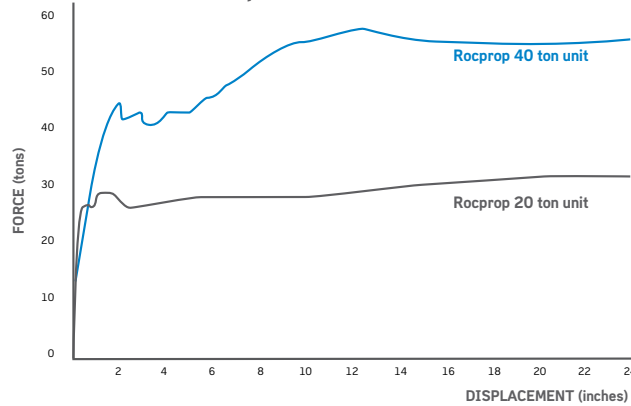

APPLICATIONS IN COAL AND OTHER SOFT ROCK MINES

- Longwall moves (shield recovery)
- Belt drive support
- Brow support
- Systematic roadway support
- Tailgate, headgate and bleeder support
- Barrier line support
- Ventilation seal construction
- Long-term support in abandoned areas

BENEFITS

- Quick and easy to install
- Installed vertical, horizontal and at an angle
- Creates pre-loading up to 20 tons
- Dynamic yield capacity
- Heights up to 20 feet
- Support applied exactly where needed
- Variety of accessories available
